

BUILT ON VIDEO DB

PRECEDENT

Playable testimony for law schools. Courtroom archives turned into a searchable library of real advocacy.

PRECEDENT-PRODUCTION-900C.UP.RAILWAY.APP

THE PROBLEM

Advocacy is a performance, and we teach it from a book.

WHAT EXISTS

Thousands of hours

Trials, depositions and arguments are public record and already online.

WHAT HAPPENS

Nobody watches

No one scrubs forty hours of trial to find the three minutes that matter.

THE REAL GAP

Findability

A casebook gives you the ruling. It cannot show you the cross-examination.

PRECEDENT

WHY SEARCH ALONE FAILS

Half of what a law student asks is a filter, not a similarity search.

“Show me every objection that was sustained.”

Nobody in a courtroom says the phrase “sustained objection”. This is a structured index of courtroom events, filtered by how the judge ruled.

“FRE 611 leading question.”

And nobody says “Rule 611” out loud either. A vector search cannot find what was never spoken.

TWO MINUTES, LIVE

Every answer is the moment itself, not a page citation.

- Every sustained objection, from the structured event index
- FRE 611, a rule number nobody says aloud
- Read the room: what the camera saw, second by second
- The same witness contradicting herself ten days apart
- Eight objections from eight courtrooms, stitched into one reel

SWITCH TO THE BROWSER

THE PART THAT IS NEW

The transcript says what was said. A vision index says what the room did while it was being said.

SPOKEN INDEX

The words

Word-level timestamps, speaker labels, and the sentence that answers the question.

VISION INDEX

The demeanour

Expression, posture and composure, sampled every eight seconds of footage.

JOINED

Checkable

Each observation is timestamped and clickable, so a claim can be verified.

PRECEDENT

THE LIBRARY

Forty seven hours of real proceedings, all public record.

1,394

indexed courtroom moments

7

cases across three archives

990

full federal trials reachable next

Supreme Court arguments via Oyez, which ships speaker-labelled transcripts, so a result names the actual justice. Federal appellate audio via CourtListener. Complete federal trials via the judiciary's own camera archive.

ALL PUBLIC RECORD

WHO IT IS FOR

Law schools are the wedge. They already buy the casebook this replaces.

WEDGE

Trial advocacy

Every course needs real examples of technique, cut by hand today.

EXPANSION

Litigation teams

Witness prep and judge research run on the same index of moments.

ADJACENT

Journalists

Finding the moment in a public record, with a citation to the second.

PRECEDENT

WHAT COMES NEXT

Two directions, and both start from the index we already have.

NEXT

Read the room, reliably

Harden face and expression recognition until the demeanour layer is dependable enough to study courtroom psychology: how witnesses behave under pressure, and how an advocate reads a room while arguing in it.

THEN

Agents that go and find it

Ask about an argument that happened this week and a web agent retrieves the proceeding, ingests it, and answers from the record. The library stops being what we loaded and becomes whatever was argued.

PRECEDENT

Students used to read this in a book.
Now they watch the moment.

PLAYABLE EVIDENCE

BUILT ON VIDEO DB

PRECEDENT-PRODUCTION-900C.UP.RAILWAY.APP

UNDER THE HOOD

VideoDB owns the media. We own the legal layer.

VIDEODB

Media and indexes

Transcription with word-level timestamps, scene indexing with a custom vision prompt, instant clip streaming, and the programmable editor for reels.

OURS

The legal taxonomy

What counts as a courtroom moment, who is speaking, which index a question belongs to, and how moments become teaching material.

Courtroom speech is ritualised, so the language of court gives reliable anchors: objection, sustained, pass the witness, may it please the court.

ARCHITECTURE

THE HARD PART

A clip is only useful if it contains the whole lesson.

An objection clip without the question, the ground and the ruling teaches nothing.

- Boundaries: grow a match until the exchange is pedagogically complete
- Routing: rule numbers and rulings are filters, not embeddings
- Attribution: name the justice, and keep broadcast voiceover out of testimony
